TECH CENTER 1600/2900

Sir:

Responsive to the outstanding Office Action dated June 18, 2003, in the above-identified application, having a response due September 18, 2003.

IN THE SPECIFICATION:

Please insert the following new abstract :

-- Disclosed herein is a family of proteins, including a specific human protein designated as HIP1, that interact differently with the gene product of a normal (16 CAG repeat) and an expanded (>44 CAG repeat) HD gene. HIP1 protein is expressed predominantly in the brain. The HIP1 protein includes a death effector domain (DED), suggesting an apoptotic function. Thus, it appears that a normal function of Huntingtin may be to bind HIP1 and related apoptosis modulators, reducing its effectiveness in stimulating cell death. Since expanded
